Chevron Technology Ventures, Energy Ventures & Dobson Partnership Invest in Breakthrough Mobile Technology

Investors bring Reality Mobile's instant, real-time collaboration technology to the energy industry

HERNDON, Va – (October 8, 2009) Reality Mobile today announced that it has secured \$6.5 million in expansion capital in a round led by Energy Ventures, the leading independent venture capital firm providing competent capital to high-growth oil and gas technology companies, in conjunction with CTTV Investments LLC, the venture capital arm of Chevron Technology Ventures LLC and communications investor, the Dobson Partnership. The funding will allow Reality Mobile to bring its enterprise-class real-time mobile collaboration platform – proven in the government and defense markets – into the energy sector, and launch a Houston office with sales and support staff.

All three funding partners were drawn to the unique features of Reality Mobile's solution. The technology has clear applications in the broad range of industries where the ability to instantly connect high-value assets with the right expertise in real-time can mean the difference between success or failure.

“In many industries, and especially in energy, experts are a strained commodity. Giving field teams visual access to the right experts in real time will improve and speed decision making, while helping companies avoid costly downtime and dangerous situations,” said Leif André Skare, partner with Energy Ventures. “Reality Mobile allows organizations to immediately bring the right perspective to any issue and better leverage their highly skilled resources in situations where their expertise is both needed and critical to maintaining and improving operations.”

Built on industry-standard infrastructure and operable on any wireless network including cellular and satellite, Reality Mobile's software allows enterprise users to collectively visualize high-value assets and data with colleagues anywhere in the world. With the RealityVision® platform, users can securely transmit live video from virtually any camera source, from cell phones to high-definition cameras, and share it immediately with any and all system users.

“We are dealing with an increase in globalization, a rise in security threats and increased competition. Having true ‘eyes’ in the field that can be accessed instantly from anywhere in the world is critical to growing business in this 24/7 digital world,” said Everett Dobson, managing partner with Dobson Partnership, and founder and former CEO of telecommunications leader

Dobson Communications. “We are pleased to help make Reality Mobile’s leading technology more accessible to enterprises that need it to stay one step ahead.”

Using the RealityVision® Screencast™ capability, users can stream a portion of their computer screen to anyone on the network. For example, geophysicists in the office can capture a dynamic section of a seismic data simulation and stream it in real time to another user, such as an expert in an overseas office or field personnel in the Gulf of Mexico.

“RealityVision allows you to be in the same place as your colleagues around the world. Whether they are in the office interpreting data, or on a rig off the coast of Angola, you can bring key personnel to the same level of visual understanding of an asset with a push of a button,” said Patrick McVeigh, chairman, Reality Mobile. “The expertise you need can be virtually by your side in moments.”

By providing applications that enhance an organization’s situational awareness through the sharing of critical data and GPS tracking, Reality Mobile has developed the missing link between people, processes, technologies and geographies. A true extension of the enterprise to mobile users, Reality Mobile enables key information and visuals to be securely shared with the people who need to see it most, particularly when seconds count.

###

About Reality Mobile

Founded in 2003, Reality Mobile is expanding the frontiers of mobile technology by giving users access to video, data and expertise throughout their organization and the world at the push of a button. With the RealityVision® software platform users access real-time, forensic grade video to be virtually on-the-ground with their colleagues to proactively address problems and improve employee safety and security, incident response, loss prevention and other critical functions. With the RealityVision® Screencast™ feature, users can stream any portion of a computer screen to any user on the network, sharing video, dynamic data visualizations and critical information in an instant.
